           The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are precured to the stabhylococcus aureus, Salmonella typhi, Klebstella invention is also useful for the identification of potential new targets to identify proteins used in proliferation, to express these proteins, and the control of proteins used in proliferation, to express these proteins, and the control of proteins used in proliferation, to express these proteins, and the control of proteins used to identify proteins used in proliferation, to express these proteins, and the control of proteins used to identify proteins used in proliferation, to express these proteins, and the control of proteins used to identify proteins used in proliferation, to express these proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins.
                                                                                                                                                                                Claim 27; Seq ID No 3905; 511pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel p53-binding region of a human CD95 receptor DNA molecule. The p53-binding region, or a vector containing it, can be used to screen for apoptosis-modulating substances potentially useful for cancer chemotherapy. This sequence represents a fragment of the human CD95 receptor promoter which is capable of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 20 BP; 6 A; 4 C; 4 G; 6 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SSSSSSSSXX
       The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in exsential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part for the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide wariety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              gene
                                 mRNAs encoding secreted proteins. No ORF has yet, been conclusively man and secreted proteins. No ORF has yet, been conclusively man RNAs encoding secreted proteins. No ORF has yet, been conclusively man RNAs or polyA+ RNAs derived from 30 different tissues. EST total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Dumas Milne Edwards J, Duclert A,

                                                                                                                                                                                                                                                                 The present sequence represents a specifically claimed partial nucleic acid sequence encoding human RAD54 (hRAD54). A method for analysing a CC sample for mutation of DNA encoding hRAD54 has been developed using a CC DNA sequence of at least 15 and no more than 30 consecutive bases of the DNA sequence encoding hRAD54. hRAD54 is a gene thought to be present identified as one of four minimal regions of chromosome 1 deletion in CC alia, that have been identified as novel hRAD54 is useful for production of proteins, inter CC amino acid sequence given in AAW62186 and known amino acid sequences cc cancer, including Xeroderma Pigmentosum and Bloom syndrome, Werner's CC syndromes and X-linked mental retardation with alpha-thalassaemia CC detecting complementary nucleotides for use as a diagnostic agent, cc especially useful for diagnosis of disease or susceptibility to diseases. XXX proteins are useful in gene therapy.

AAH51601 represents a human genomic nucleotide sequence comprising sbg1, CC g34665, sbg2, g35017 and g35018 nucleic acid sequences located on the CC human chromosome 13g31-g33 locus. The nucleotide sequences contain CC hab62907 - AAB62915 represent cDNA human sbg1 cDNA sequences and polymorphisms. Sequences AAH51602 - AAH51626 and CC products. AAH51627 - AAH51631 and AAB62916 - AAB62918 represent g35018 CC cDNA sequences and protein products. Primers AAH51632 - AAH51699 are used crpresented by sequences and protein products. Primers AAH51632 - AAH51699 are used CC amplicons which comprise biallelic markers located on the chromosome CC amplicons which comprise biallelic markers located on the chromosome CC are represented in the sequences by degenerate/undefined base codes. PCR CC grimers AAH51818 and AAH51819 are used in the isolation of sequences of CC the invention. The biallelic marker containing nucleotide sequences of used to determine the identity of the nucleotide at a biallelic marker in CC genotyping by determining the identity of a nucleotide at a Region CC subjects. By determining the frequency of a biallelic marker in a prodistory of a nucleotide at a Region can be predistored to determine a predisoposition to or early onset of schizophrenia or treatment against schizophrenia or bipolar disorder or a beneficial response to or side effects related to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    05-DEC-2000;

```
The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a

                                                                                                                                                                                                                    A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. AAX12938 to AAX13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based primary nucleotide sequences, also known as contigs. The computer-based of Enterococcus faecalis genome with system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated Enterococcus faecalis polynucleotides and polypeptides - used to develop products for the detection of Enterococcus and focuse in vaccines for prevention or attenuation of Enterococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; Page 596-606; 2084pp; English.

                                                                                                                  RESULT 12
                                                                                                                                                                                                                                                                               The invention relates to a family of human genes referred to as the CC DAZ gene family, and to a functional DAZ homologue, DAZH. Members of the CC DAX gene family are clustered in the same region of the Y chromosome. CC In particular, the invention relates to an isolated DAZ gene (AAZ9249) present in interval 6D and/or 6E of the distal portion of Yq, mutations (CC in which are associated with reduced sperm count. The DAZH gene CC family, including DAZH is expressed in germ cells. DAZ and DAZH cnucledide sequences may be used as a source of primers and probes for CC or deletion of the DAZ gene. They are also used as human chromosome Y reduced sperm count associated with alteration CC or deletion of the DAZ gene. They are also used as human chromosome Y reduced sperm counts. Sequence AAS9249 represents human DAZ cDNA, and CC aAZ92491-Z92492 are partial DNA sequences of DAZ gene family members.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to the genomic sequence of Pyrococcus abyssi and P. abyssi proteins (see AAB96053-AAB96042). P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is a fragment of the genomic sequence of P. abyssi. The 5' end of this sequence overlaps with the 3' end of AAH41225 and the 3' end of this sequence overlaps with the 5' end of AAH41227. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to 110
                                                                                                                                                                                                                                                                                                         Sequence 349980 BP; 98084 A; 80447 C; 77665 G; 93784 T; 0 other:
                                                                                                                                                                                                                                                                                                                                          AAH75903-AAH75920 and AAG66436.
                                                                                                                                                                                                                                                                                                                                                Note: This patent is in the same patent family as WO200065062, which contains additional sequences as shown in AAB99132-AAB99143,

These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA of the invention.

which encode human secreted proteins AAB75280 - AAB75287. Included in the convention are protein sequences AAB75280 - AAB75287. Included in the convention are protein sequences AAB75280 - AAB75287. Included in the convention are protein sequences AAB75280 - AAB75287. Included in the convention are protein sequences AAB75280 - AAB75287. Included in the convention are protein sequences AAB75280 - AAB75287. Included in the convention are protein sequences with which these conventions and the activities of the activities of the proteins and conventions and the activities of their agonists and antagonists and antagonists and antagonists and antagonists and antagonists conventions; cerebroprotective; conventions and vulnerary activity. The protein and polynucleotide copthalmalogical; and vulnerary activity. The protein and polynucleotide sequences, their agonists and antagonists may be useful for treating, correcting and diagnosing diseases and disorders such as autoimmune conventing and diagnosing diseases and disorders such as autoimmune conventions are cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, c.g. angiogenesis, nervous system disorders e.g. Alzheimer's disease, c.g. angiogenesis, nervous system disorders e.g. Alzheimer's disease, c.g. corneal infection. The polypeptides can also be used to aid wound e.g. corneal infection. The polypeptides can also be used to aid wound e.g. corneal infection. The polypeptides can also be used to aid wound c.g. corneal infection. The polypeptides can also be used to aid wound e.g. corneal infection. The polypeptides can also be used to aid wound e.g. corneal infection. The polypeptides can also be used to aid wound c.g. corneal infection. The polypeptides can also be used to aid wound e.g. corneal infection. The polypeptides can also be used to aid wound to polypeptides can also be used as a food additive or preservative to c.g. corneal infections and contact trissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative t

CC (serpentine transmembrane antigen of the prostate). STRAP-1 is compensation transmembrane antigen of the prostate). STRAP-1 is compensation, but which show the prototype member of the STRAP family of proteins (AAY58194-Y88197) cc which exhibit a high degree of structural conservation, but which show cc gene has been localised to chromosome 792. STRAP-1 is thought to be a compensation of the stransmembrane protein and is expressed predominantly in prostate call protein characterised by six transmembrane domains and "serpentine" manner into three extracellular and two intracellular loops. STRAP-1 mRNA and protein expression is maintained at high levels and corresponding to the stransmembrane at high levels and corresponding to extracellular and two intracellular loops. Throughout all stages of prostate cancer. STRAP-1 mRNA and/or protein is colon, compensate and ovarian cancer. The function of the STRAP protein is not compensate and ovarian cancer. The function of the STRAP proteins is not compensate and ovarian cancer. The function of the STRAP proteins is not compensate and covarian cancer that the presence of six transmembrane compensates. The structural immune stating bladder, colon, compensate and the protein induces cellular and humoral immune responses against compensation in the strapentic stating). STRAP-1 and compensate compensation and proteins are proteins may be used for detection, prognosis, compensation and proteins are proteins and be used for detection, prognosis, compensation and prognostic reagents, for identifying STRAP-expressing cells for screening linhibitors of STRAP expression. Since high levels of STRAP compensation and prognostic reagents, and because they are expressed mainly compensation of the cell surface, they are expressed mainly compensation of the cells, agents targetted to them should have the surface.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           On Aug 31, 2001 this sequence version replaced gi:14161146.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the together with a note of the overlapping clone name. Note that the corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following assembly was confirmed by restriction digest. The following in the feature table with their source databases: Em., EMBL; Sw:, Sw:, Sw: Sympore "re- "phrematic unit of the more than one manuscro".
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 agagatgcccaaactgtttt 20

On Nov 16, 2001 this sequence version replaced gi:16944088.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the corresponding to the overlapping clone, as we submit sequences with corresponding to the overlapping clone, as we submit sequences with this sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following in the feature table with their source databases: Em. EMBL; Sw:, Gatabases can be found at
                                   Homo sapiens chromosome 1 clone RP4-722L13 map p22.3-31.2, ***

It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    be preserved.

It currently consists of 35 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

 pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                    Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative electrophoresis. Vector DNA was prepared from a derivative inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and adaptored vector DNA, and transformed into chemically-competent E. coli XLIO-Gold (Stratagene) cells and selected for ampicillin resistance.
